--- Day 1: Trebuchet?! ---

Something is wrong with global snow production, and you've been selected to take a look. The Elves have even given you a map; on it, they've used stars to mark the top fifty locations that are likely to be having problems.

You've been doing this long enough to know that to restore snow operations, you need to check all fifty stars by December 25th.

Collect stars by solving puzzles. Two puzzles will be made available on each day in the Advent calendar; the second puzzle is unlocked when you complete the first. Each puzzle grants one star. Good luck!

You try to ask why they can't just use a weather machine ("not powerful
```

enough") and where they're even sending you ("the sky") and why your map

realize that the Elves are already loading you into a trebuchet ("please

calibration document (your puzzle input) has been amended by a very young

As they're making the final adjustments, they discover that their

Consequently, the Elves are having trouble reading the values on the

need to recover. On each line, the calibration value can be found by

combining the first digit and the last digit (in that order) to form a

The newly-improved calibration document consists of lines of text; each

line originally contained a specific calibration value that the Elves now

In this example, the calibration values of these four lines are 12, 38, 15

Consider your entire calibration document. What is the sum of all of the

The first half of this puzzle is complete! It provides one gold star: *

Your calculation isn't quite right. It looks like some of the digits are

actually spelled out with letters: one, two, three, four, five, six, seven

Equipped with this new information, you now need to find the real first and

In this example, the calibration values are 29, 83, 13, 24, 42, 14, and 76

Although it hasn't changed, you can still get your puzzle input.

Elf who was apparently just excited to show off her art skills.

hold still, we need to strap you in").

, and 77. Adding these together produces 142.

, eight, and nine also count as valid "digits".

last digit on each line. For example:

. Adding these together produces 281.
